Clinical Operational Notes (All Field Provider Levels):

1. The practice of EMS medicine is built upon the foundation of "taking medical care to the patient". To achieve this objective, appropriate equipment (airway equipment kit, med/trauma equipment kit, suction device, AED/Cardiac Monitor/Defibrillator, patient packaging equipment) should be brought to the patient's side per Protocol 14J – Scene Coordination to minimize critical treatment delays.
2. Minimize active movement on the patient's part in settings of suspected myocardial ischemia, stroke, and dyspnea. Move and package the patient for transport with safety considerations for all involved.
3. Maximum pediatric medication dosing equals standard adult dosing.
