

EMS System for Metropolitan Oklahoma City and Tulsa 2020 Medical Control Board Treatment Protocols

Approved 9/11/19, Effective 1/15/20, replaces all prior versions

3K – NON-INVASIVE POSITIVE PRESSURE VENTILATION (NIPPV) ADULT

EMT
EMT-INTERMEDIATE 85
ADVANCED EMT
PARAMEDIC

Indications:

1. Dyspnea – Uncertain Etiology – Adult.
2. Dyspnea – Asthma – Adult.
3. Dyspnea – Chronic Obstructive Pulmonary Disease (COPD) – Adult.
4. Dyspnea – Congestive Heart Failure (CHF) – Adult.
5. Acute Allergic Reactions – Adult (Dyspnea).
6. Water Submersion Event – Adult (Dyspnea).

Contraindications:

1. Apnea.
2. Pediatric dyspnea.
3. Adult dyspnea of lesser severity able to be managed without NIPPV.
4. Adult dyspnea of greater severity requiring invasive airway management.
5. Altered mental status preventing patient cooperation with NIPPV.
6. Active or suspected impending emesis.
7. High risk of aspiration/Impaired gag reflex.
8. Facial trauma/features impairing a tight NIPPV mask-face seal.

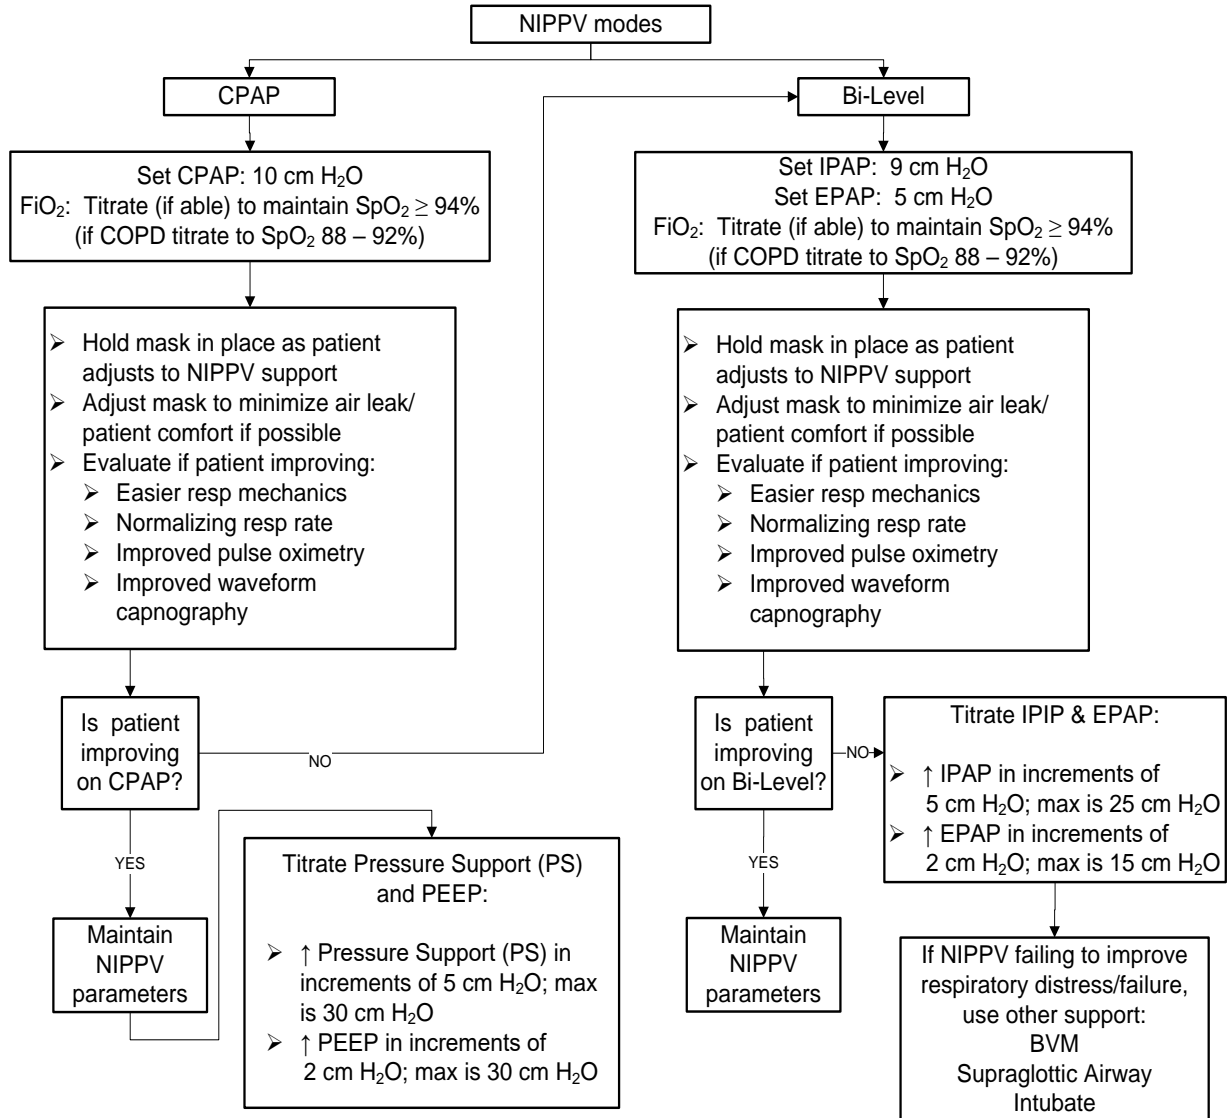

EMS System for Metropolitan Oklahoma City and Tulsa 2020 Medical Control Board Treatment Protocols

Approved 9/11/19, Effective 1/15/20, replaces all prior versions

PROTOCOL 3K: Non – Invasive Positive Pressure Ventilation (NIPPV) - Adult, cont.

Bi-Level/CPAP Ventilation Algorithm

Special Considerations/Complications

- > Patients requiring bronchodilator therapy?
 - ✓ Bronchodilators via nebulizer t-piece in line with NIPPV
- > It is very important to achieve a tight seal between face and NIPPV mask to deliver anticipated levels of NIPPV
- > Monitor closely for nausea/impending emesis – be prepared to quickly remove facemask to avoid aspiration of emesis

EMS System for Metropolitan Oklahoma City and Tulsa 2020 Medical Control Board Treatment Protocols

Approved 9/11/19, Effective 1/15/20, replaces all prior versions

PROTOCOL 3K: Non – Invasive Positive Pressure Ventilation (NIPPV) - Adult, cont.

Technique (ZoLL Model 731):

Circuits:

- 731 ventilator circuits feature a low dead space design that minimizes CO₂ re-breathing.
- Note: dead space (circuit and HME) should never be greater than **25%** of the patient's tidal volume (set or spontaneous).
- The 2 standard ventilator circuits cover the range of patient from infant through adult.
 - Pediatric/adult – patients 20 kg through adult, minimum tidal volume 200mL;
 - Infant/pediatric – 5 through 30 kg, maximum tidal volume 300 mL. ****DO NOT USE FOR NIPPV**

Connections - check the ventilator for proper operation before connecting to patient:

Step 1: Connect ventilator circuit (use test lung whenever possible) oxygen hose to 55 psi regulated output.

EMS System for Metropolitan Oklahoma City and Tulsa 2020 Medical Control Board Treatment Protocols

Approved 9/11/19, Effective 1/15/20, replaces all prior versions

PROTOCOL 3K: Non – Invasive Positive Pressure Ventilation (NIPPV) - Adult, cont.

Step 2: Power

Turn power switch to "ON"

- Unit performs a Self-Check and AUTO-CAL of the internal transducers.
- 731 then begins operation using the default settings.
- AUTO-CAL is performed every 5 minutes thereafter or when an altitude or temperature change is detected.
- Start-up settings may be changed during operation at any time.

Factory Defaults:

- *FiO2:* 21%
- *High PIP Limit:* 35 cm H2O
- *PEEP:* 5 cm H2O
- *Vt:* 450 ml
- *BPM:* 12
- *I:E* 1:3
- *Mode:* AC (V)

Step 3: Changing a Primary Parameter:

3. Confirm by Press select "✓" to accept new value

1. Current value is highlighted.
2. Turn rotary encoder to desired value.
 - Adult
 - Pediatric
 - NIPPV
 - Custom (Cardiac Arrest)
 - Last setting

Remember: "Touch, Turn, Confirm"™
